Rincon Power Introduces New 900V, 350A Contactor

Carpinteria, California – Rincon Power is pleased to announce the latest addition to their line of sealed contactors: the new RXC35. This hermetically sealed contactor offers the ability to isolate high voltage systems in a compact and robust package. Designed and assembled in Carpinteria, California (USA), the 350A RXC35 Series joins Rincon Power’s wide portfolio of hermetically sealed, high voltage contactors, and manual disconnect switches.

The RXC35 offers 350A of continuous current carry capability for applications ranging from 12V to 900VDC. The single pole, single throw (SPST) relay features optional auxiliary contacts which can be used as part of a high voltage safety circuit, for status feedback, and for weld detection. The contactor features industry-leading low contact resistance ensuring minimal heat generation and low loss. The hermetic seal allows the unit to be operated in virtually any environment, while also ensuring no contact oxidation over the life of the switch. The contactor can be installed in any orientation, even upside-down, providing maximum installation flexibility for even the most challenging packaging arrangements. Complete specifications and more information can be found at www.rinconpower.com/products

According to Markus Beck, Rincon Power’s Vice-President of Sales, “Our 350A RXC35 series, offers an attractive solution for switching high voltage systems in a compact package. It’s a drop-in replacement for customers seeking alternative suppliers to streamline and improve their supply chain. This contactor has been successfully integrated in numerous applications from electric vehicles, buses, off-road equipment, marine applications, and a wide range of high voltage battery systems.”

Rincon Power is committed to keeping inventory in stock, resulting in lead times averaging less than a few weeks. Rincon Power accepts all major credit cards. To place an order or learn more, please call +1-805-456-6424, email info@rinconpower.com, or visit us on the web at www.rinconpower.com

Rincon Power is based in Carpinteria, California and designs, tests, and manufactures “Products for an Electrified Future.” Rincon Power’s portfolio includes pre-charge relays, charging contactors, main contactors, and a range of manual service disconnect switches. Led by a team of industry veterans and seasoned professionals, Rincon Power draws on deep technical experience with product design, testing, and manufacturing. With a focus on clean energy and e-mobility, Rincon Power serves a wide range of markets including bus, truck, off-highway, mining, material handling, military, marine, solar/PV, aerospace, ESS, charging infrastructure, and more. www.rinconpower.com
